**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/US2005/002535

Box No. I Basis of the report

1. With regard to the **language**, this report is based on

- the international application in the language in which it was filed
- a translation of the international application into , which is the language of a translation furnished for the purposes of:
 - international search (under Rules 12.3(a) and 23.1(b))
 - publication of the international application (under Rule 12.4(a))
 - international preliminary examination (under Rules 55.2(a) and/or 55.3(a))

2. With regard to the **elements*** of the international application, this report is based on (*replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report*):

Description, Pages

| | |
|-----------|--|
| 1-6, 8-18 | as originally filed |
| 7 | received on 27.01.2006 with letter of 24.01.2006 |

Sequence listings part of the description, Pages

| | |
|------|--|
| 1-12 | received on 27.01.2006 with letter of 24.01.2006 |
|------|--|

Claims, Numbers

| | |
|------|---------------------|
| 1-23 | as originally filed |
|------|---------------------|

Drawings, Sheets

| | |
|---------|---------------------|
| 1/3-3/3 | as originally filed |
|---------|---------------------|

a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing

3. The amendments have resulted in the cancellation of:

- the description, pages
- the claims, Nos.
- the drawings, sheets/figs
- the sequence listing (*specify*):
- any table(s) related to sequence listing (*specify*):

4. This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).

- the description, pages
- the claims, Nos.
- the drawings, sheets/figs
- the sequence listing (*specify*):
- any table(s) related to sequence listing (*specify*):

* If item 4 applies, some or all of these sheets may be marked "superseded."

**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/US2005/002535

Box No. II Priority

1. This report has been established as if no priority had been claimed due to the failure to furnish within the prescribed time limit the requested:
 - copy of the earlier application whose priority has been claimed (Rule 66.7(a)).
 - translation of the earlier application whose priority has been claimed (Rule 66.7(b)).
2. This report has been established as if no priority had been claimed due to the fact that the priority claim has been found invalid (Rule 64.1). Thus for the purposes of this report, the international filing date indicated above is considered to be the relevant date.
3. Additional observations, if necessary:

**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/US2005/002535

Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

1. The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), or to be industrially applicable have not been examined in respect of:
 - the entire international application,
 - claims Nos. 1-23 with respect to industrial applicability, claim 1 partially and claims 6-9, 17, 18 with respect to PCT Rule 13ter, Rule 5.2 and Art. 17(2)(a) PCT.

because:

- the said international application, or the said claims Nos. relate to the following subject matter which does not require an international preliminary examination (*specify*):
- the description, claims or drawings (*indicate particular elements below*) or said claims Nos. are so unclear that no meaningful opinion could be formed (*specify*):
- the claims, or said claims Nos. are so inadequately supported by the description that no meaningful opinion could be formed (*specify*):
- no international search report has been established for the said claims Nos. 1-23 with respect to industrial applicability, claim 1 partially and claims 6-9, 17, 18 with respect to PCT Rule 13ter, Rule 5.2 and Art. 17(2)(a) PCT.
- a meaningful opinion could not be formed without the sequence listing; the applicant did not, within the prescribed time limit:
 - furnish a sequence listing on paper complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Preliminary Examining Authority in a form and manner acceptable to it.
 - furnish a sequence listing in electronic form complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Preliminary Examining Authority in a form and manner acceptable to it.
 - pay the required late furnishing fee for the furnishing of a sequence listing in response to an invitation under Rules 13ter.1(a) or (b) and 13ter.2.
- a meaningful opinion could not be formed without the tables related to the sequence listings; the applicant did not, within the prescribed time limit, furnish such tables in electronic form complying with the technical requirements provided for in Annex C-bis of the Administrative Instructions, and such tables were not available to the International Preliminary Examining Authority in a form and manner acceptable to it.
- the tables related to the nucleotide and/or amino acid sequence listing, if in electronic form only, do not comply with the technical requirements provided for in Annex C-bis of the Administrative Instructions.
- See separate sheet for further details

**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/US2005/002535

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

| | | |
|-------------------------------|-------------|-----------------|
| Novelty (N) | Yes: Claims | 1-5,10-16,19-23 |
| | No: Claims | |
| Inventive step (IS) | Yes: Claims | |
| | No: Claims | 1-5,10-16,19-23 |
| Industrial applicability (IA) | Yes: Claims | - |
| | No: Claims | |

2. Citations and explanations (Rule 70.7):

see separate sheet

Box No. VI Certain documents cited

1. Certain published documents (Rule 70.10)

and / or

2. Non-written disclosures (Rule 70.9)

see separate sheet

Box No. VII Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

see separate sheet

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/US2005/002535

Supplemental Box relating to Sequence Listing

Continuation of Box I, item 2:

1. With regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed invention, this report was established on the basis of:
 - a. type of material:
 a sequence listing
 table(s) related to the sequence listing
 - b. format of material:
 on paper
 in electronic form
 - c. time of filing/furnishing:
 contained in the international application as filed
 filed together with the international application in electronic form
 furnished subsequently to this Authority for the purposes of search and/or examination
 received by this Authority as an amendment* on 24.01.2006
2. In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.
3. Additional comments:

* *If item 4 in Box No. I applies, the listing and/or table(s) related thereto, which form part of the basis of the report, may be marked "superseded."*

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.
PCT/US2005/002535

Re Item I

Basis of the report

Reference is made to the following documents:

- D1: WO03031462 (YALE UNIVERSITY). 17.04.2003.
- D2: LI ET AL., SOCIETY FOR NEUROSCIENCE ABSTRACTS, 2003, page ABSTRNO67803.
- D3: DATABASE BIOSIS [Online] BIOSCIENCES INFORMATION SERVICE, PHILADELPHIA, PA, US; 2003, LI M ET AL: Database accession no. PREV200400194121
- D4: GRANDPRE ET AL., NATURE, 2002, vol. 417: 547-551
- D5: OERTLE T ET AL: J. NEUROSCIENCE, 2003, vol. 23(13): 5393-5406
- D6: DOMENICONE ET AL., NEURON, 2002, vol 35: 283-290

Re Item II

Priority

It should be noted that the documents D7-D8 indicated in the search report as 'PX documents' have not been taken into consideration for the evaluation of novelty and inventive step, since the priority of the present application had not been furnished in due time. Nevertheless, the Applicant should take into account that for a posterior European phase, this documents might be relevant.

Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

- I. Claims 1-23 relate to subject-matter considered by this Authority to be covered by the provisions of Rule 67.1(iv) PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(I) PCT).

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.

PCT/US2005/002535

II. The present claim 1 relates to an extremely large number of possible NgR1 antagonists not yet discovered neither explored by the applicant. Support and disclosure in the sense of Article 6 and 5 PCT is to be found however for only a very small proportion of such NgR1 antagonists. The non-compliance with the substantive provisions is to such an extent, that the search was performed taking into consideration the non-compliance in determining the extent of the search of claim 1 (PCT Guidelines 9.19 and 9.23).

The search of claim 1 was restricted to the claimed NgR1 antagonists which appear to be supported, namely Nogo fragments and anti-NgR1 antibodies (see claims 6-9,15-18), and those already known NgR1 inhibitors such as Ompg and MAG.

III. The specific sequences of claim(s) 6-9, 17,18 have, according to PCT Rule 13ter.1.c, not been searched since the Sequence Listing as present in the description does not comply with WIPO Standard ST 25 prescribed in the administrative instructions under Rule 5.2. The Sequence Listing has been furnished neither in paper form nor in machine readable form as provided for in the same instructions and the applicant has not remedied the disclosed deficiencies within the time limit fixed in the invitation pursuant to PCT Rule 13ter.1.a.

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Novelty

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and discloses Nogo fragments which antagonize Nogo (Pep 1, residues 1-25 of the extracellular domain, Pep 2, 11-35, Pep 3, 21-45, Pep 2-41, Pep 140, soluble hNogo-A(1055-1120) and SEQ.ID.N.7-53) for use in a method for treating a central nervous system disease, disorder or injury (by decreasing the inhibition of axonal growth) (see pages 5, line 11 - page 8, line 19, table 2 and examples 1-23)

D2 describes an anti-NgR1 antibody, 7E11, an IgGa molecule that recognizes a unique

epitope of 16 amino acid residues located on a LRR domain of rat NgR1 which promotes neurite outgrowth in primary rat DRG neurons (see abstract).

The subject-matter of claim 1 differs from this known D1 and D2 in that the NgR1 antagonist used in the present application, namely sNgR(310)Fc, significantly increased dopaminergic neural survival in the substantia nigra after striatal 6-OHDA lesioning, whereas in D1 and D2 the NgR1 antagonist used reduced growth cone collapse in chick DRG explant cultures and promote neurite outgrowth chick DRG explant cultures (see example 16 of D1) and promote neurite outgrowth in primary rat DRG neurons (see abstract of D2) while in the present application.

The subject-matter of claims 1-5,10-16,19-23 (see item III) is therefore new (Article 33(2) PCT).

Inventive step

The problem to be solved by the present invention may be regarded as the provision of methods to treating conditions involving dopaminergic neuronal degeneration.

The solution to this problem proposed in claim 1 of the present application is the provision and administration of NgR1 antagonists in mammals displaying signs or symptoms of dopaminergic neuronal degeneration.

This solution cannot be considered inventive for the following reasons:

Nogo fragments and antibodies which antagonize NgR1 have been already described in the prior art (see for example D1 and D2, see above, and corresponding passages cited in the search report of documents D3-D5). Moreover, D1 intends the use of Nogo fragments in a method for treating a central nervous system disease, disorder or injury (see page 8, lines 3-10). D4 suggests the therapeutic use of NgR1 antagonist(s) in clinical conditions such as spinal cord injury, brain trauma, white matter stroke or chronic progressive multiple sclerosis. Finally, D6 suggests as well the use of NgR1 antagonists for the development of therapies for spinal cord and CNS injury (see abstract, page 284, left-hand column,

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.
PCT/US2005/002535

paragraph 1 to page 286, right-hand column, paragraph 2 and page 288, right-hand column, last paragraph to page 289, left-hand column, paragraph 1).

In view of the above paragraph, the skilled person would be prompted to develop therapies for CNS disorders or injuries using NgR1 antagonists as taught in D1-D6. Therefore the subject-matter of claims 1-5,10-16,19-23 cannot be considered as involving an inventive step under the requirements of Art. 33(3) PCT.

Industrial applicability

For the assessment of the present claims 1-23 on the question whether they are industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.

Re Item VI

Certain documents cited

Re Item VII

Certain defects in the international application

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.
PCT/US2005/002535

This ISA adopts the view that the specification only demonstrates a significant increased dopaminergic neural survival in the substantia nigra when the NgR1 antagonist sNgR(310)Fc is infused into the striatum after striatal 6-OHDA lesioning.

This ISA set out to examine the plausibility of verifying that all claimed soluble forms, antibodies, antibody fragments, Ig-fusion proteins, monoclonal antibodies and Nogo fragments (when restricted to those disclosed in claims 6-9,15,17-18) and concludes that this undertaking constitutes an undue burden for the skilled person seeking to perform the claimed invention and does not fulfil the requirements of Art. 5 PCT.

Re Item VIII

Certain observations on the international application

I. Claim 1 does not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. The claim attempts to define the subject-matter in terms of the result to be achieved, which merely amounts to a statement of the underlying problem, without providing the technical features necessary for achieving this result.

This ISA considers that the second medical use claim defines the therapeutic application of the NgR1 antagonist by a mechanism of action which does not allow any practical application in the form of a defined, real treatment of a pathological condition. The claims should introduce a list of pathological conditions (diseases) cited in the application, or it should be shown that means are available which would allow the skilled person to recognize which additional condition(s) would fall within the functional definition.

Soluble Nogo Receptor-1 Polypeptides

[0034] In some embodiments of the invention, the antagonist is a soluble Nogo receptor-1 polypeptide (Nogo receptor-1 is also variously referred to as "Nogo receptor," "NogoR," "NogoR-1," "NgR," and "NgR-1"). Full-length Nogo receptor-1 consists of a signal sequence, a N-terminus region (NT), eight leucine rich repeats (LRR), a LRRCT region (a leucine rich repeat domain C-terminal of the eight leucine rich repeats), a C-terminus region (CT) and a GPI anchor. The sequences of human and rat Nogo receptors are shown in Table 1.

10

Table 1. Sequences of Human and Rat Nogo receptor-1 Polypeptides

| | |
|--|--|
| Human Nogo receptor SEQ ID NO: 1 | MKRASAGGSRLLAWVLWLQAWQVAAPCPGACVCYNEPKVTT SCPQQGLQAVPGVIPAASQRIFLHGNRISHVPAASFRACRNLTIL WLHSNVLARIDAAAFTGLALLEQLDLSDNAQLRSVDPATFHGL GRLHTLHLDRCGLQELGPGLFRGLAALQYLYLQDNALQALPDD TFRDLGNLTHLFLHGNRISSVPERAFRGLHSIDRLLLHQNRVAH VIPHAFRDLGRLMTLYLFANNLSALPTEALAPRLALQYLRLND NPWVCDCRARPLWAWLQKFRGSSSEVPCSLPQRLAGRDLKRLA ANDLQGCAVATGPYHPIWTGRATDEEPLGLPKCCQPDAADKA |

[0035] Soluble Nogo receptor polypeptides used in the methods of the invention comprise an NT domain; 8 LRRs and an LRRCT domain and lack a signal sequence and a functional GPI anchor (*i.e.*, no GPI anchor or a GPI anchor that fails to efficiently associate to a cell membrane). Suitable polypeptides include, for example, amino acids 26 – 310 (SEQ ID NO: 3) and 26 – 344 (SEQ ID NO: 4) of the human Nogo receptor and amino acids 27 – 310 (SEQ ID NO: 5) and 27 – 344 (SEQ ID NO: 6) of the rat Nogo receptor (Table 2). Additional polypeptides which may be used in the methods of the invention are described, for example, in International Patent Applications PCT/US02/32007 and PCT/US03/25004.
